

The City of Oshkosh is waiting on the funding details from the WDNR to provide financial assistance for replacement of private-side lead water service pipes. It is anticipated more information will be available by mid-May; until then, the financial assistance program is on hold.

In the event of a private-side water service leak requiring immediate replacement, please contact Maria Fletcher at 920-236-5258. The City will submit your property to WDNR for Archeological, Historical, Environmental and Endangered Species review. **Failure to submit the review prior to starting the water service replacement, or not following the resulting conditions from the WDNR, will prevent the property owner from being eligible for financial assistance once this assistance becomes available.**
